

The mechanically operated "SOYEE" Shoe Cover Dispenser is the latest product in our range of innovative equipment. It is practical, economical and helps maintain a clean environment.

The dispenser solves the problem of changing shoes, or manually putting on shoe covers by hand before entering a clean facility or area. Just place your foot into the dispenser and a shoe cover will be automatically dispensed to cover your shoe or work boot.

When using the mechanically operated shoe cover dispenser, employees, clients, patients or visitors, are more relaxed as they no longer need to bend over to put on shoe covers by hand.

More importantly, the extra barrier of protection the shoe covers provide helps to control the spreading of dust, dirt and other contaminants into clean areas. The water-proof CPE shoe covers help keep flooring dry and dust free when worn before entering rooms or offices from wet or dusty areas.

The user-friendly dispenser is ideal for use within cleanroom dressing areas, computer rooms, data facilities, laboratories, hospitals, factories, construction sites and police forensic facility units.

Features:

- No need for electricity or battery to operate, mechanically designed.
- Convenience. The dispenser can be deployed easily since it doesn't require an electrical power connection.
- Reliability - Shoe cover dispensing success rate is over 99%.
